

Cleaning and Disinfecting Guidance for Schools and Child Care Programs

1 Make a bleach solution*

Mix 5 tablespoons (1/3rd cup) bleach per gallon of room temperature water OR 4 teaspoons bleach per quart of room temperature water.

After 24 hours, the solution may not be effective.

**CDC recommended disinfecting solution mix.*

2 Spray/wipe the solution

Spray directly onto the blocks from a distance or simply apply the spray to a clean cloth and wipe down each piece.

Avoid spraying too much liquid onto the toys to protect them from warping.

3 Gently wipe down

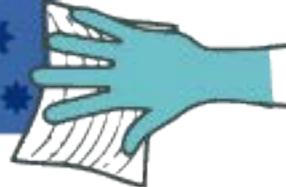

Gently wipe down each toy piece with a dry clean cloth & let pieces air dry. Drying in the sun is great as it speeds up the drying process.

However strong sunlight or prolonged exposure can lead to color fade and cracking.

! NEVER SOAK OR IMMERSE OUR WOODEN BLOCKS IN WATER !

! AVOID the use of alcohol-based cleaners, solutions or direct alcohol to clean our blocks. !
The alcohol-based cleaners dissolve the paint and graphics of the My Family Builders™ blocks.
